

Our 2017/2018 Graphic Communications Students need your valued assistance.

Our students will be nearing the end
of their training at NAIT in April

...they will need your help

The opportunity emerges again for the Graphic Arts Industry to partner with the Graphic Communications Program towards the training of your future employees.

We have enthusiastic students and you have a busy work environment that they can learn from. The Work Integrated Learning Experience is a two-week component of the program and is scheduled this year, from [April 16 to April 27, 2018](#). By that time, the students will have completed their technical training at NAIT and will be available for immediate employment.

...we value your assistance

NAIT's past graduates are now contributing to the Graphic Arts Industry, and many are becoming leaders within their respective organizations. In fact, you may be a NAIT grad yourself. Industry's essential input towards the training of these students over the years, has been a major influence towards their success in the industry.

If you feel you can provide a rewarding applied learning experience for one of our students, please fill out the accompanying form and return as indicated.

Thank you for being a "Partner in Education" with the Northern Alberta Institute of Technology.

Yes, we will host a NAIT student from April 16 to April 27, 2018. We understand that the student may not be ready to fill a high volume production position, but that of being in a position to immerse themselves in the day-to-day operations of an organization such as ours, will be a valuable learning experience.

Would the student require a NAIT computer?

No, we are unable to host a NAIT student at this time.

Our students have been trained in:

Adobe InDesign CC

QuarkXpress 9.5

Adobe Illustrator CC

CorelDraw X7

Adobe PhotoShop CC

Adobe Acrobat CC

Adobe Muse CC

Competency using both Macintosh and Windows operating environments.

A large part of student training also included Applied Creative Graphics, with an emphasis towards Print Media Design Concepts.

Electronic Proofing, Impositions, and basic Pre-Flighting. Plotter and Plate Making practices were also introduced. In addition, students completed an introductory multimedia course which incorporated various skills and practices of basic web page design and construction.
